

## ELECTRICAL TOOLS Toolbox Talk

- All tools used on site must either be 110v center tapped
- (maximum voltage to earth is 55v) or if 240v fitted with a non-removable residual current device (RCD).
- Remember that it is still possible to get an electric shock even with 110v
- tools or with those protected an RCD if they are faulty,
- especially in wet or humid conditions.
- Battery powered equipment has voltages or 36v or below.
- Only use the tool for its intended purpose.
- Most drills, grinders, jigsaws when in use will expose you to noise & vibration. Read your risk assessment and wear the appropriate PPE and only use for the allowed times.
- These tools must be PAT tested at the specified intervals.
- Check to tool and any extension cables before you use it for obvious defects. Try and avoid running extension cables in puddles.
- Do not use electrical tools outside in wet conditions unless they are designed for such use.
- Never alter or modify electrical tools.
